

NOTES TO USERS

This map is for use in determining the National Flood Insurance Program's rates and necessary severity of action subject to flooding, specifically from coastal flooding, and is not intended to be used for any other purpose. It is not intended to be used for any other purpose.

To obtain more detailed information in areas where Base Flood Elevations (BFEs) are shown, consult the Flood Insurance Study (FIS) report for your community. The FIS report provides detailed information on the BFEs shown on this map, including the Flood Profile and Floodway Data and/or Survey of Floodway Elevation Data, contained within the Flood Insurance Study (FIS) report for your community. The FIS report also contains information on the BFEs shown on this map, including the Flood Profile and Floodway Data and/or Survey of Floodway Elevation Data, contained within the Flood Insurance Study (FIS) report for your community.

Coastal Flood Hazard Elevations shown on this map are the highest of:
 1. The North American Vertical Datum of 1988 (NAVD 88) BFEs of the FIS report for your community.
 2. The BFEs shown on the FIS report for your community.
 3. The BFEs shown on the FIS report for your community.

Revisions to the boundaries were completed on coastal features and floodway between cross sections. The boundaries were based on hydrologic considerations with regard to representation of the National Flood Insurance Program's Floodway and other pertinent boundary data were provided in the Flood Insurance Study report for the project.

Custom areas not in Special Flood Hazard Areas may be protected by flood control structures. Refer to Section 2.0 of the Flood Insurance Study report for information on flood control structures.

The projections used in the preparation of this map are Universal Transverse Mercator (UTM) zone 12. The horizontal datum was North American Vertical Datum of 1988. The vertical datum was North American Vertical Datum of 1988. The datum used in the production of FISs is the National Geodetic Survey's datum of 1988. The datum used in the production of FISs is the National Geodetic Survey's datum of 1988. The datum used in the production of FISs is the National Geodetic Survey's datum of 1988.

Flood elevations on this map are referenced to the North American Vertical Datum of 1988. These flood elevations must be compared to structure and ground elevations referenced to the same vertical datum. For information on how to obtain structure and ground elevations, contact the National Geodetic Survey at the following address:

Coastal areas shown on this map are based on the best data available at the time of publication. The boundaries shown on this map are not intended to be used for any other purpose. It is not intended to be used for any other purpose.

Please refer to the separately printed Map Index for an overview map of the study showing the location of map sheets, community and regulatory boundaries, and a listing of Communities with National Flood Insurance Program rates for each community as well as a listing of the projects on which each project is located.
