

NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not constitute a representation or warranty by the Federal Government or any other agency of the United States. The community may independently obtain the information necessary to administer the National Flood Insurance Program.

To obtain more detailed information in areas where **Base Flood Elevation** and **Flood Hazard** information are shown, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Statutory Elevation data contained within the Flood Insurance Study (FIS) report that encompasses the FEMA County or areas that the FIS is shown as the FIS report is available from the National Flood Insurance Program. These FISs are available for purchase from the National Flood Insurance Program. Users should be aware that the FISs shown on the FIS report are subject to change. They should be updated as the most current FIS report is available. Accordingly, flood elevation data presented in the FIS report should be updated in conjunction with the FISs for purposes of construction and/or floodplain management.

Coastal Base Flood Elevation shown on this map represents the combination of 100 Year, Annual Recurrence Interval (ARI) Storm Surge, 100 Year Storm Surge and 100 Year Storm Surge in the Flood Insurance Study report for the jurisdiction. Elevation shown in the Summary of Statutory Elevation data should be used for construction and/or floodplain management purposes when they are higher than the elevations shown on this FIS.

Boundaries of the floodway are compiled at cross sections and interpolated between cross sections. The boundaries were based on hydrologic computations with input of measurements of the National Flood Insurance Program. Floodway width and other pertinent floodway data are provided in the Flood Insurance Study report for the jurisdiction.

Certain areas not in Special Flood Hazard Areas may be overlaid by flood hazard boundaries shown in section 2.1 "Flood Protection Measure" of the Flood Insurance Study report for information on flood control structures for this jurisdiction.

The projection used in the preparation of this map was Universal Transverse Mercator, Zone 18N. The datum used was the North American Datum of 1983 (NAD 83). The datum, projection or datum used in the production of FISs for adjacent jurisdictions may vary. It is recommended that users verify the datum, projection or datum used in the production of FISs for the jurisdiction.

Flood elevations on this map are referenced to the North American Vertical Datum of 1988. These flood elevations may be converted to elevations and ground elevations referenced to the same vertical datum. For information regarding conversion between the National Vertical Datum of 1983 and other vertical datum, users should consult the National Oceanic and Atmospheric Administration (NOAA) website at <http://www.noaa.gov> or contact the National Geospatial Survey at (800) 368-6868.

To obtain current elevation, description, and/or location information for **beach ridges** shown on this map, please contact the Information Services Branch of the National Oceanic and Atmospheric Administration at (800) 368-6868, or visit its website at <http://www.beachridges.org>.

Base map information shown on this FIS was provided by Yavapai County. This base map, produced in 2005, was provided in digital format at a scale of 1:10,000.

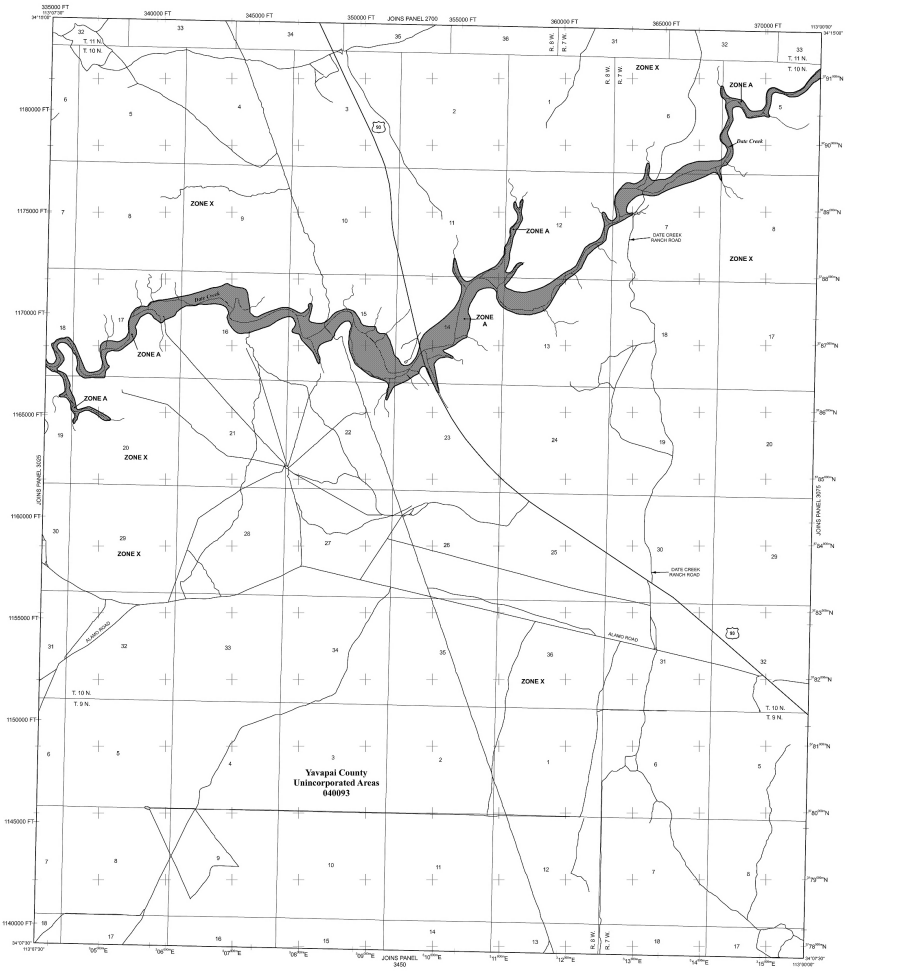

This map, which was created and is not a base map, was created using data from base maps shown on the previous FIS for this jurisdiction. The Floodway and Floodway Data are not intended to be used for flood insurance purposes. As a result, the Flood Profiles and Floodway Data in the Flood Insurance Study report (which contain additional hydrologic data) may show more detailed information than what is shown on this map.

Geographic details shown on this map are based on the best data available at the time of publication. Because changes due to maintenance or discontinuance may have occurred since this map was published, users are advised to consult appropriate community officials to verify current correct locations.

Please refer to the regulatory official map books for an accurate map of the county showing the layout of map panels, community map regulatory subdivisions, and a listing of communities that contain National Flood Insurance Program zones for each community as well as a listing of the panels on which each community is located.

Contact the FEMA Map Service Center at 1-800-358-6638 for information on available products associated with the FIS. Available products may include preliminary report letters of Map Change, a Flood Insurance Study report, and/or digital versions of this map. The FEMA Map Service Center can also be reached by fax at 800-358-6638 or by e-mail at fema@fema.dhs.gov.

If you have **questions about this map** or questions concerning the National Flood Insurance Program in general, please call 1-877-FEMA-MAP (1-877-368-2627) or visit the FEMA website (<http://www.fema.gov>).

LEGEND

SPECIAL FLOOD HAZARD AREAS SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

ZONE A: Areas with special flood hazards subject to inundation by the 1% annual chance flood. The depth of inundation or elevation is given in FIS. The Special Flood Hazard Area is shown by a solid line. The 1% annual chance flood is shown by a dashed line. The 1% annual chance flood is shown by a dashed line.

ZONE X: Areas with special flood hazards subject to inundation by the 1% annual chance flood. The depth of inundation or elevation is given in FIS. The Special Flood Hazard Area is shown by a solid line. The 1% annual chance flood is shown by a dashed line. The 1% annual chance flood is shown by a dashed line.

FLOODWAY AREAS IN ZONE A: Floodway areas within Zone A. The floodway area is shown by a solid line. The floodway area is shown by a solid line.

OTHER FLOOD AREAS: Areas with special flood hazards subject to inundation by the 1% annual chance flood. The depth of inundation or elevation is given in FIS. The Special Flood Hazard Area is shown by a solid line. The 1% annual chance flood is shown by a dashed line. The 1% annual chance flood is shown by a dashed line.

OTHER AREAS: Areas with special flood hazards subject to inundation by the 1% annual chance flood. The depth of inundation or elevation is given in FIS. The Special Flood Hazard Area is shown by a solid line. The 1% annual chance flood is shown by a dashed line. The 1% annual chance flood is shown by a dashed line.

PROPERTY BOUNDARIES: Property boundaries are shown by a solid line. Property boundaries are shown by a solid line.

ROADS: Roads are shown by a solid line. Roads are shown by a solid line.

RAILROADS: Railroad lines are shown by a solid line. Railroad lines are shown by a solid line.

POWER LINES: Power lines are shown by a solid line. Power lines are shown by a solid line.

WATER BODIES: Water bodies are shown by a solid line. Water bodies are shown by a solid line.

ELEVATION DATA: Elevation data is shown by a solid line. Elevation data is shown by a solid line.

MAP INFORMATION: Map information is shown by a solid line. Map information is shown by a solid line.
