- Exhibit 5 – Work Study Maps
- Exhibit 6 – Annotated Flood Insurance Rate Map (FIRM) Panel

SECTION 1.0 INTRODUCTION

1.1 Purpose of Study

The Poquito Valley Study Area, herein referred to as the Study Area is an approximately twenty one (21) square mile area located in the currently unincorporated area of Yavapai County, Arizona. The majority of the Study Area is currently mapped as being within FEMA Zone “X” with a large portion currently mapped as being located within a Special Flood Hazard Area (SFHA) designated as Zone “A”.

The purpose of this study is to identify the watershed that drains toward Lonesome Valley Wash and its tributaries within the Study area, estimate the 100-year peak flows, and prepare a detailed floodplain re-delineation of fourteen (14) miles of effective approximate FEMA Flood Zone “A” SFHA. An approximate 8 mile portion of the proposed SFHA resulting from the detailed floodplain re-delineation will consist of floodplain and floodway delineations. The balance will consist of a floodplain delineation only.

The function of this report is to provide the technical documentation to support the detailed floodplain re-delineation. The Yavapai County Flood Control District may utilize this study as a regulatory tool within the community to manage development within the floodplains that lie within the Study Area.

A Letter of Map Revision (LOMR) was issued by FEMA on February 8, 2008 in response to the *Poquito Valley Flood Hazard Study* dated June 15, 2007. This Technical Data Notebook (TDN) serves as an update to these previously issued documents and is submitted in response to FEMA’s request for Base Flood Elevations referenced to the North American Vertical Datum of 1988 (NAVD 88).

1.2 Authority of Study

Cardno WRG (WRG) was contracted with Yavapai County Flood Control District to prepare a detailed floodplain re-delineation of approximately fourteen (14) miles of effective approximate Flood Zone “A” Special Flood Hazard Areas for the watershed identified to drain toward Lonesome Valley Wash within the Study Area.

Yavapai County has recently contracted with Cardno to provide this updated TDN.

1.3 Location of Study Reach

The Study Area is an approximately twenty one (21) square mile area located north of the Town of Prescott Valley and is immediately north of State Highway 89A just north of the Yavapai County Fairgrounds in Yavapai County, Arizona. Antelope Village and The Viewpoint North which are existing residential subdivisions lie near the southwest corner of the Study Area and are expected to drain towards the Study Area. State Highway 89A generally acts as the southern drainage boundary for the Study Area. The land to the north, east, and west of the Study Area consists mainly of undeveloped rangeland.

More specifically, the Study Area is located within all of or a portion of Sections 35 and 36 of Township 16 North, Range 1 West, Sections 31 and 32 of Township 16 North, Range 1 East, Sections 1, 2, 11, 12, 13, 14, 24, and 25 of Township 15 North, Range 1 West, and Sections 5, 6, 7, 8, 17, 18, 19, 20, and 30 of Township 15 North, Range 1 East of the Gila and Salt River Meridian. See Exhibit 1 – *Vicinity Map* for the general vicinity of the project.

The Study Area itself is located west of the Hickey Mountain and Black Hills Area of the Prescott National Forest. The Study Area currently consists of low density residential housing and undeveloped rangeland. The general topography

Notes:

1. The effective water surface elevations are from the June 27, 2008 LOMR.

SECTION 3.0 SURVEY AND MAPPING INFORMATION

3.1 Field Survey Information

Elevations based on the National Geodetic Vertical Datum (NGVD) of 1929 were obtained for three (3) elevation reference marks installed as a part of this study, and an additional six (6) existing monuments for the purposes of this study. These elevation reference marks are indicated on Exhibit 5 – *Work Study Maps*, as POQERM1-9.

Invert elevations and adjacent roadway center line elevations for a dipped culvert crossing at Coyote Springs Road, south of Plum Creek Road were also obtained for the purposes of this study.

3.2 Mapping

The topographic mapping used for the purposes of this study is that provided by the Yavapai County Flood Control District. The topographic mapping was prepared by Vertical Mapping Resources, Inc. under contract with the Yavapai County Flood Control District and consists of a 2' contour interval. The topographic mapping is reported to be on the NGVD 29 vertical datum, and the NAD83 State plane horizontal datum.

3.3 Datum Conversion

A Letter of Map Revision (LOMR) was issued by FEMA on February 8, 2008 based on the revised analysis presented in the *Poquito Valley Flood Hazard Study* dated June 15, 2007, preceding this updated TDN. As mentioned, Base Flood Elevations presented in the *Poquito Valley Flood Hazard Study* dated June 15, 2007, were based on NGVD 29 vertical datum. Subsequent to issuance of the LOMR, FEMA has requested that the Base Flood Elevations yielded by the hydraulic analysis presented in the original LOMR request be presented in

reference to NAVD 88. To comply with this request, the elevation data values within the HEC-RAS model were adjusted in reference to NAVD 88 and the HEC-RAS model was re-executed. Datum conversion factor values were adjusted based on the values presented in Table 8 – Vertical Datum Conversions found in the FIS for Yavapai County Dated September 3, 2010. The values used are reproduced below in Table 3.3.1 – *Vertical Datum Conversion Factors*.

Table 3.3.1 Vertical Datum Conversion Factors

Stream Name	Conversion Factor
Lonesome Valley Wash	2.75
